VETERAN - OWNED
SMALL BUSINESS

MONITORING/METERING

Venergy installs water quality monitoring and metering systems that tie in to Building Automated Systems or independent web-based platforms.

All systems are tailored to meet your needs, ensuring accurate measurement, efficient resource management and cost-effective operations.

Our expertise in design-build construction, merged with our specialized maintenance services guarantee streamlined and sustainable monitoring and metering systems. See an example of one of our monitoring solution installations below.

TESTING

Venergy offers a full range of water testing options for microbiological and environmental applications. Our team of Field Technicians have experience across a wide range of Federal facilities. They will create a sampling plan to fit your needs and will deliver all samples to the Laboratory within 24 hours for testing. Reports from the laboratory are delivered directly to the facility POC, and consultation on any necessary follow up is available.

Our **in-house laboratory**, located in North Charleston, SC is CDC-Elite Certified for the testing of Legionella, SC DHEC and EPA certified for analytical testing of potable water, wastewater, surface & ground water.

Corey Clive – CEO

Mr. Clive founded Venergy Group, LLC in 2009, drawing on his extensive background in environmental and energy efficiency from leading firms. An advocate for veterans and small businesses, Corey's leadership recently earned Venergy recognition from the Department of Energy as a qualified Energy Savings Company. By integrating our capabilities, Venergy delivers comprehensive, turnkey real estate solutions.

Roy Monk – PM

Mr. Monk is an ASSE certified Legionella and Water Safety Management Specialist. He manages Venergy's Water Safety Division with projects nationwide. He works with each facility's staff to ensure all their needs are met, and all local, State and Federal Standards and guidelines are adhered to concerning reducing health and safety risk associated with waterborne pathogens.

DIVERSE EXPERTISE

Our staff includes licensed electricians, contractors, and engineers who can self-perform various trades. This range gives us the ability to best serve any project scope.
